Career Objective

Recent **Master of Information Technology (Network and Cybersecurity)** graduated from **Flinders University** with more than **2 years of customer service experience** and practical academic experience in network administration, system administration, Windows Server, Active Directory, networking, and cybersecurity. Seeking an entry-level **Network Administrator, Network Engineer, Systems Administrator, or IT Support** position where I can apply my knowledge of network infrastructure, Windows environments, troubleshooting, and security while developing my professional IT career. I bring strong technical problem-solving, analytical thinking, communication, teamwork, and customer service skills, together with a strong interest in maintaining reliable, secure, and efficient IT infrastructure.

Technical Skills

Networking

- TCP/IP Networking - Understanding of TCP/IP protocols, network communication, addressing, and connectivity.
- LAN/WAN Fundamentals - Knowledge of local and wide-area network infrastructure and connectivity.
- Routing & Switching - Understanding of routing, switching, packet forwarding, and network communication.
- VLAN Configuration - Configuring VLANs to segment and manage network traffic logically.
- DNS & DHCP - Configuring and troubleshooting DNS name resolution and DHCP IP address allocation.
- NAT - Understanding of Network Address Translation for private and public network communication.
- VPN Fundamentals - Understanding of secure remote connectivity and VPN concepts.
- Network Troubleshooting - Diagnosing connectivity issues using systematic troubleshooting techniques.
- Cisco IOS Fundamentals - Basic configuration and troubleshooting of Cisco routers and switches.
- Cisco Networking - Practical experience with Cisco networking concepts using Packet Tracer.

Network Administration

- Network Configuration & Monitoring - Configuring network devices and monitoring network performance and connectivity.
- Network Device Configuration - Configuring basic router, switch, VLAN, and network service settings.
- IP Addressing & Subnetting - Applying IPv4 addressing, subnet masks, CIDR, and subnetting concepts.
- Network Testing & Troubleshooting - Testing connectivity and identifying network issues using diagnostic methods.

- Wireless/LAN Fundamentals - Understanding wired and wireless LAN architecture, connectivity, and basic troubleshooting.
- Network Documentation - Documenting network configurations, topologies, addressing, and troubleshooting information.

Systems Administration

- Windows Server - Installing, configuring, and administering Windows Server environments.
- Active Directory - Managing users, groups, permissions, and domain-based resources.
- User & Group Management - Creating and managing user accounts, security groups, and access permissions.
- Group Policy - Applying Group Policy settings to manage users, devices, and security configurations.
- Windows 10/11 - Supporting Windows desktop environments, configurations, and common troubleshooting tasks.
- Ubuntu Linux - Basic Linux administration, command-line operations, system configuration, and troubleshooting.
- Kali Linux - Familiarity with Linux-based cybersecurity tools and security testing environments.
- Remote Desktop - Using remote access tools to troubleshoot and support Windows systems.
- Basic PowerShell - Using PowerShell for basic administration, commands, automation, and system management.

Cloud & Virtualisation

- Microsoft Azure Fundamentals - Understanding of core Azure services, cloud concepts, security, and resource management.
- Microsoft 365 - Familiarity with Microsoft 365 applications, services, user environments, and administration concepts.
- VMware - Understanding of virtual machines, virtual networking, and basic VMware environments.
- Hyper-V - Understanding of virtual machine creation, configuration, and management using Hyper-V.

Cybersecurity

- Network Security - Understanding of network security principles, threats, controls, and secure configurations.
- Firewall Fundamentals - Understanding of firewall rules, traffic filtering, network segmentation, and access control.
- Access Control - Applying authentication, authorisation, permissions, and least-privilege principles.
- Vulnerability Assessment - Identifying and assessing potential weaknesses in systems and network environments.
- Security Controls - Understanding and applying preventive, detective, and corrective security controls.
- Security Best Practices - Applying cybersecurity principles to protect systems, networks, accounts, and data.

Tools & Software

- Cisco Packet Tracer - Designing, configuring, and testing simulated Cisco network environments.
- Wireshark - Capturing and analysing network packets to troubleshoot connectivity and network issues.
- PowerShell - Performing basic Windows administration and automating repetitive administrative tasks.
- Microsoft Office - Proficient with Word, Excel, PowerPoint, Outlook, and other productivity tools.

- Microsoft 365 - Familiarity with Microsoft 365 applications, collaboration tools, and cloud-based services.

Education

Professional Year

2026 - 2027

Performance Education, Adelaide City

Key Subjects: Australian Business Culture and Environment, Achieving Career Success, Australian Workplace Skills and Professional Business Communication

Master of Information Technology (Network and Cybersecurity)

2023 - 2025

Flinders University, Tonsley, SA

Specialisation: Network and Cybersecurity

Bachelor of Information Technology

2017 - 2021

Softwarica College of IT & eCommerce, Coventry University, Nepal

Key learning areas included: Computing, Windows and Linux

University Project

Enterprise Network Design

2025

Flinders University, Tonsley, SA

Objective:

Designed and configured a secure enterprise network to develop practical knowledge of network infrastructure, routing, switching, and network services.

Tools:

Cisco Packet Tracer, Cisco networking concepts, routers, switches, VLANs, DHCP and DNS.

Duties:

- Designing an enterprise network topology using Cisco Packet Tracer.
- Configuring routers and switches to establish network connectivity.
- Configuring VLANs to logically segment network traffic.
- Configuring DHCP and DNS services to support network operations.
- Performing network testing and troubleshooting to identify and resolve connectivity issues.

Outcome:

Successfully developed and tested an enterprise network environment while applying practical networking concepts including routing, switching, VLANs, DHCP, DNS, and troubleshooting.

Windows Server Administration

2024

Flinders University, Tonsley, SA

Objective:

Developed practical skills in Windows Server administration, directory services, user management, and network services.

Tools:

Windows Server, Active Directory, Group Policy, DNS and DHCP.

Duties:

- Installing and configuring Windows Server environments.
- Creating and managing Active Directory users and groups.
- Configuring Group Policy to manage system and user settings.
- Configuring DNS and DHCP services.

- Troubleshooting and testing Windows Server and network services.

Outcome:

Developed practical experience in Windows Server administration and Active Directory management, building a foundation for junior Systems Administrator and IT Infrastructure roles.

Employment History

Console Operator**2024 - Present****On the Run (OTR), Adelaide, SA**

- Delivering customer service in a fast-paced retail environment while maintaining a professional and positive approach.
- Assisting customers with enquiries and resolving issues efficiently.
- Collaborating with team members to achieve daily operational and service targets.
- Maintaining accurate stock levels, inventory presentation, and operational standards.
- Managing multiple customer and operational priorities during busy periods.
- Following workplace safety, security, and operational procedures.

Personal Attributes

Technical Problem Solving

Demonstrated through university networking and systems administration projects involving network configuration, troubleshooting, Windows Server, Active Directory, DNS, DHCP, and security controls.

Analytical Thinking

Applying structured analysis when identifying network connectivity issues, assessing security threats, and troubleshooting technical problems.

Communication & Customer Service

Developed through approximately two years of customer-facing experience at On the Run, requiring clear communication, patience, and professional interaction with customers and colleagues.

Teamwork & Adaptability

Working effectively with colleagues in a fast-paced environment while adapting to changing operational requirements and priorities.

Continuous Learning

Continuously developing technical knowledge across networking, systems administration, cybersecurity, cloud technologies, and industry certifications.

Certifications

- Cisco CCNA Enterprise Networking, Security, and Automation
- Cisco CCNA Switching, Routing, and Wireless Essentials
- Cisco CyberOps Associate

Hobbies and Interests

- Networking and IT infrastructure
- Cybersecurity and emerging technologies
- Learning new IT tools and technologies
- Technology projects and troubleshooting
- Continuous professional development
